# Farmer Connection

Connecting farmers from all over.
github.com/BigGlasses/FarmerConnection
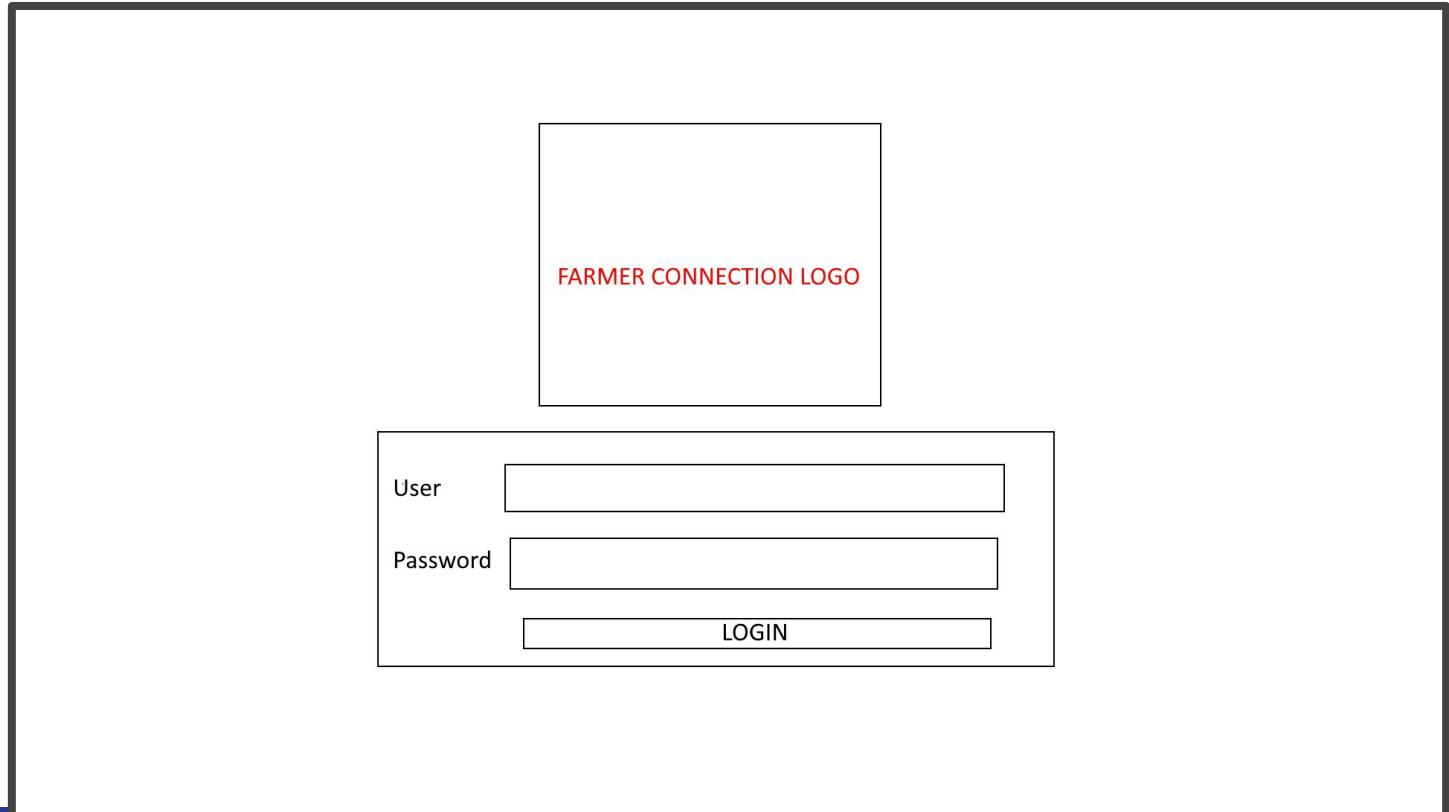

Problem Statement

- The spread of disease between farms is a massive issue in farming.
- Vaccinations can be costly for large herds (up to $4 per cow).
- The only way the word is spread about diseases in regions is through articles and word-of-mouth.

Proposal

- Develop a system that allows farmers to notify other farmers of a disease within their livestock.
- Allows farmers to be aware of diseases around them and only spend money on the vaccines that are needed to protect their livestock.
